PROFILE

Software Engineer with experience developing and integrating complex enterprise systems across the Salesforce, insurance and financial domains. Strong hands-on experience with Apex, Java, Spring Boot, REST APIs, SQL and Git, combined with a solid understanding of business processes, enterprise integration and software architecture.

Currently working at LB Forsikring, where I develop Salesforce solutions and have responsibility for the daily operation, monitoring and continued development of a custom Java/Spring Boot integration between the company's core insurance system and Salesforce. I also work extensively with AI solutions and am particularly interested in how AI can be integrated into enterprise systems to create practical business value.

My background also includes ERP consulting, business consulting and financial controlling, giving me a strong ability to understand business needs, navigate complex environments and translate requirements into robust technical solutions. I am continuously expanding my skills with a particular interest in backend development, IT architecture, enterprise integration and AI.

CORE COMPETENCIES

Software development	Integration & architecture	Business & emerging technology
Java / Spring Boot	REST APIs	AI solutions
Apex / Salesforce	Backend development	Business analysis
JavaScript / LWC	Enterprise integration	Agile / Scrum / SAFe
SQL	IT architecture	End-to-end delivery
Git	Data processing	Problem solving

WORK EXPERIENCE

Software Engineer — LB Forsikring

Nov 2022 – Present

- Develop and maintain Salesforce solutions for the organisation with 400+ platform users, working in an agile SAFe environment.
- Develop solutions using Apex, LWC, JavaScript, SOQL/SOSL and Salesforce Flows.
- Develop and maintain integrations between Salesforce and external enterprise systems using REST APIs and other integration technologies.
- Since spring 2025, responsible for the daily operation, monitoring and continued development of a custom-built integration between the core insurance system and Salesforce, developed using Java and Spring Boot with MongoDB for processing and data storage.
- Work with backend processing, data transformation, API integrations and troubleshooting across multiple systems.
- Contribute to AI initiatives and solutions, exploring how AI can be applied within enterprise systems and business processes.
- Lead developer for the implementation and continued development of Salesforce Marketing Cloud since spring 2023, including AMPscript and SSJS.
- Collaborate with developers, business stakeholders and technical teams to analyse requirements and deliver end-to-end solutions.
- Take an active interest in IT architecture and the design of scalable, maintainable solutions across systems and platforms.

IT Business Consultant — Visma Software

Mar 2022 – Oct 2022

- Analysed customer business processes and translated business needs into suitable software solutions.
- Advised customers on the implementation and use of the cloud-based Visma.net ERP platform.
- Worked at the intersection of business requirements, software functionality and technical solutions.

ERP Consultant — KeyBalance A/S

Apr 2018 – Feb 2022

- Analysed customer business processes and designed tailored solutions around an internally developed ERP platform.
- Worked with both frontend and backend development, deployment, testing and ongoing technical support.
- Worked in a Scrum-based development environment and acted as a link between customer requirements and technical implementation.

WORK EXPERIENCE — CONTINUED

Financial Controller — VICE Media Group

Sep 2015 – Oct 2017

- Responsible for financial controlling and reporting for the Copenhagen office and supported Scandinavian entities.
- Worked closely with finance, production and agency departments across Scandinavia and the EMEA finance organisation.
